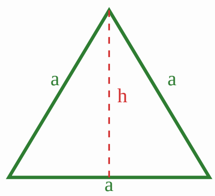
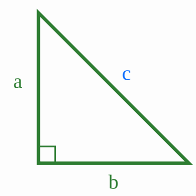
Equilateral Triangle

1. Height: $h = \frac{\sqrt{3}}{2}a$
2. Area: $A = \frac{\sqrt{3}}{4}a^2$
3. Perimeter: $P = 3a$



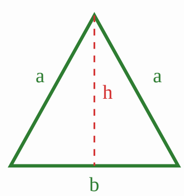
Right Angle Triangle

1. Area: $A = \frac{1}{2} \times b \times h$
2. Perimeter: $P = a + b + c$
3. Hypotenuse: $c = \sqrt{a^2 + b^2}$



Isosceles Triangle

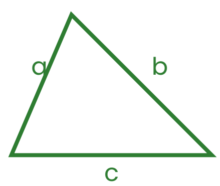
1. Height: $h = \sqrt{a^2 - \frac{b^2}{4}}$
2. Area: $A = \frac{b}{4}\sqrt{4a^2 - b^2}$
3. Perimeter: $P = 2a + b$



General Triangle (Heron's Formula)

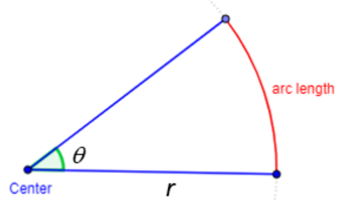
Used when all three sides (a, b, c) are known.

1. Semi-perimeter: $s = \frac{a+b+c}{2}$
2. Area: $A = \sqrt{s(s-a)(s-b)(s-c)}$



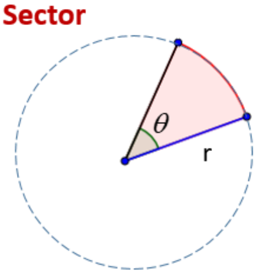
Circle Formulas

Arc Length and Area of Sector



If θ is measured in degrees then

$$\text{arc length} = \frac{\theta}{360°} \times 2\pi r$$



If θ is measured in degrees then

$$\text{area of sector} = \frac{\theta}{360°} \times \pi r^2$$
