

Equilateral Triangle

1. Height: $h = \frac{\sqrt{3}}{2}a$

2. Area: $A = \frac{\sqrt{3}}{4}a^2$

3. Perimeter: $P = 3a$

Right Angle Triangle

1. Area: $A = \frac{1}{2} \times b \times h$

2. Perimeter: $P = a + b + c$

3. Hypotenuse: $c = \sqrt{a^2 + b^2}$

Isosceles Triangle

1. Height: $h = \sqrt{a^2 - \frac{b^2}{4}}$

2. Area: $A = \frac{b}{4} \sqrt{4a^2 - b^2}$

3. Perimeter: $P = 2a + b$

General Triangle (Heron's Formula)

Used when all three sides (a, b, c) are known.

1. Semi-perimeter: $s = \frac{a+b+c}{2}$

2. Area: $A = \sqrt{s(s-a)(s-b)(s-c)}$

Circle Formulas

Arc Length and Area of Sector

If θ is measured in degrees then

$$\text{arc length} = \frac{\theta}{360^\circ} \times 2\pi r$$

If θ is measured in degrees then

$$\text{area of sector} = \frac{\theta}{360^\circ} \times \pi r^2$$
